Lijun Chen is a visiting Ph.D. student from the Key Research Center for Linguistics and Applied Linguistics, at Guangdong University of Foreign studies who is working on first language acquisition.

His current study examines the acquisition of aspect in Mandarin, with an emphasis on children with developmental language disorder and children with Autism Spectrum Disorder. His previous research (for which he obtained a master's in psycholinguistics) focused on Chinese-English bilingual speakers' mental lexicon.

His interests in the relationship between language and cognition, including in instances of language impairment, allowed him to obtain a scholarship to collaborate for a year with the ABCCD lab.
